

QIANG YANG

My research interests lie broadly in community ecology and macroecology, in particular in biodiversity, ecological networks, and stability. I am fascinated by the nature of the relationships among these properties, how they scale tropically and spatially, and how they are regulated by environmental change and human activities.

Project: Synthesizing changes in plant pollinator networks across environmental gradients. A synthetic understanding of how plant-pollinator networks change across environmental gradients is currently limited by heterogeneity in spatial, temporal and taxonomic grains. Further, new modeling and statistical tools are necessary to quantify the roles of neutral and deterministic factors in driving emergent patterns of spatial network change. This project addresses these gaps by developing a general framework of modeling and statistical tools, mobilizing data, and applying these to understand the effects of elevation on plant-pollinator interactions.

Project: The redistribution of global floristic diversity by naturalized alien plants. The uniqueness of the regional species assemblage is losing due to human-facilitated exchanges of alien species. Plants form the foundation of primary productivity of terrestrial ecosystems, and ultimately determine the biodiversity and functions of the system. However, to what extent global floras have lost their uniqueness by alien species has not been quantified at the global scale yet, and we also do not know how much human activities and climate change have contributed to the loss. This project aims to identify the temporal and spatial patterns in floristic uniqueness loss due to naturalization of alien plants, and investigate the biogeographic and anthropogenic drivers underlying these patterns.

DATA SKILLS

Advanced level in R, Bash, and Git

Classic statistical analysis using GLMMs, GAMMs, SEM

Dimensionality reduction and ordinations in ecology

Species distribution modelling

Network simulation and analysis

- 2018 • **Trinity College Dublin**
PhD in Ecology 📍 Dublin, Ireland
- Thesis: The multidimensionality of ecological stability.** During my PhD study, I 1) used theoretical simulations of network dynamics to investigate how different stability components and the relationship between them are regulated by the intensity of external perturbations, 2) explored the effect of the environmental autocorrelation and correlation on the predictability of various components of ecological stability and 3) verified empirically the decoupling effect of perturbations on the relationship between ecological stabilities using the dataset of the NutNet - a global grassland experimental system.
- 2012 • **Institute of Hydrobiology, Chinese Academy of Sciences**
M.S. in Hydrobiology 📍 Wuhan, China
- Thesis: Formation and hydrological control of diatom blooms in Hanjiang River.** I investigated the effect of climatic and hydrological conditions on the formation of diatom blooms, and put forward a feasible strategy for algal bloom control.
- 2008 • **Ocean University of China**
B.S. in Marine biology and environment 📍 Qingdao, China
- Thesis: The effect of the ocean current on the diffusion of marine aquaculture pollutants.**

TEACHING EXPERIENCE

- 2022, 2023 • **taught “Interaction Networks” for the master module “Statistics in Biodiversity Sciences” at Martin-Luther-University Halle-Wittenberg.**
- 2019
|
2021 • **led the Ecology Journal Club in the Department of Biology, University of Konstanz.**
- 2016
|
2017 • **demonstrated the course *Data Handling and Analysis* to Master students in Environmental Science and Biodiversity & Conservation, Trinity College Dublin.**
- 2014 • **taught *Structural Equation Modeling with R* and *Data Wrangling with R* to the R Users Group in Trinity College Dublin.**
- 2012 • **taught *ANOVA and Community Ordination Analysis* to first-year postgraduates in Donghu Experimental Station for Lake Ecosystem, Chinese Academy of Science.**

FUNDING & AWARDS

- 2017 • **The Flexpool Support Fund** by German Centre for Integrative Biodiversity Research (iDiv) Halle-Jena-Leipzig
Topic: Impacts of alien species naturalization on the altitudinal gradients of pollination networks.
- 2017 • **Innovation in Sustainability Science Award** by Ecological Society of America
The award is given to the authors of a peer-review paper published in the past five years that exemplifies leading edge work on solution pathways to sustainability challenges.

- 2013 ● **Government of Ireland Postgraduate Fellowship** by Irish Research Council
Scholarship covering my PhD study.
- 2012 ● **Chang Hua Award** by Chinese Academy of Sciences
Awarded for research performance.
- 2012 ● **Hai Da Award** by Chinese Academy of Sciences
Awarded for research performance.
- 2012 ● **Di Ao Award** by Chinese Academy of Sciences
Awarded for research performance.
